technical details

FOSCARINI

A diffuser disc made from white plastic, a slim shape that evokes a 33 rpm vinyl record. The name given to this wall or ceiling lamp is Ellepi – an Italian acronym for long playing. The low-consumption light source follows the outline of the central ring and diffuses a glow that dims when moving closer to the outer shape of the lamp. This creates an elegant dimming that highlights the sophistication of the thicknesses and proportions. Ellepi is subtle yet highly effective, either on its own or in multiple compositions.

ALESSANDRA MATILDE

After studying stage design, Matilde Alessandra designed installations and sets for several years, and then began to create her first projects in the field of lighting.

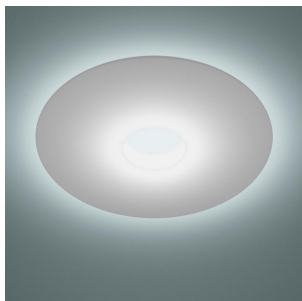

Her work – which ranges from light sculptures, to installations, to industrial design – always stands out for its elemental shapes and bright colours. Her contribution to the Foscarini collection is the Ellepi lamp, a ring of diffused and reflected light.
