

GRILLAGE

Design by
François Azambourg

Description

The principle for creating the basic shape of Grillage is very simple: a sheet of metal with staggered grooves is folded, origami-style, and then drawn to create a mesh.

Grillage tells the story of its manufacturing process (drawing, folding, creasing); it reveals everything about itself, from how it was designed to how it was produced.

Grillage - wire mesh - it's the way to achieve both comfort and ergonomics with an all-metal piece of furniture.

May be dressed with a special quilted covering for added comfort and a warmer look. Both versions are suitable for both indoor and outdoor use.

Technical Specifications

CONSTRUCTION

To manufacture Grillage, a sheet of metal, which is grooved in staggered rows, is stretched. Metal wire is then soldered to the exterior, piece by piece. The sheet thus obtained is folded at various points to create the seat.

An optional seat pad made up in MOOD (for INDOOR use), or in fabrics specially treated to make them suitable for OUTDOOR use.

Base in tubular steel, supplied with plastic tips for insertion on delivery. Grillage has been treated against corrosion with a cataphoresis treatment, anti-rust lacquer and a final layer of anti-UV polyester lacquer. This treatment makes Grillage just as suitable for outdoor use as it is to be used indoors.
