

ANTIGONE

Design by
Pierre Paulin

Description
Low table with structure in solid beech, equipped with adjustable jacks. Top in 12 mm thick toughened clear glass (polished flat joints). The base of Antigone is worked in the manner of a wooden framework with vigorous, more masculine lines. Its great architectural rigour is characterised by a labyrinthine geometric assembly of solid wood blocks. The addition of the glass top, the use of beech, a tight-pored species, all combine to lighten and modernise the Antigone tables, which are true timeless classics.
