

CUTS

Design by
Philippe Nigro

Description

In 2013, Philippe Nigro develops the concept of the notch first demonstrated in the models INSEPARABLES and CUTS, applying it this time to the low table: a flat surface is 'disrupted' by notches to create 4 distinct tops positioned at 3 different heights (17, 25 and 32 cm). The angulation of the two intersecting notches is 28°. The irregular architecture of the low table thus obtained contrasts with the slimmness (just 8 mm) of the single material and its immaculate whiteness to create a result which is more than appealing: the varying dimensions and differing levels of the tops are practical whilst the notches can be used as magazine storage. From whichever of its 4 sides it is viewed, its contours are different yet always surprisingly light, like a paper aeroplane.

8 mm thick low table in satin white lacquered expanded moulded polyurethane, reinforced with a steel framework.
